# [6] UNPACKING AND INSTALLATION

## 1. Installing procedure flowchart

There are many combinations between this machine and option units. For installing option units, observe the following procedures for efficiency.

To install the devices efficiently, follow the procedure below.

Some peripheral devices may have been installed as standard devices depending on the main unit model.

Part of descriptions and illustrations may be different.

\* When installing an option, refer to the Service Manual for that option and or the AR-M350 / M450 Service Manual.

## 2. AR-P14 installing procedure

### <Before installation>

- \* This installation procedure is provided for use with the AR-M350U/ M450U series.
- \* To connect this machine to a network, a Print Server Card (NIC) AR-NC5J must be installed to the multi-function controller board in advance.

- \* To enable the printer expansion function, the product key must be acquired.

The application number, machine serial number, and product key number are important information. Keep the above information for future reference.

### 1) Mount the printer expansion kit ROMs to the control PWB.

#### <1>Turn off the main switch of the main unit of the printer

Turn the main switch located on the front side of the main unit to the "OFF" position.

If the machine is equipped with a facsimile unit, also turn off the FAX power switch.

Then remove the power plug from the outlet.

#### <2>Remove the cables connected to the control PWB unit.

Remove all the cables connected to the control PWB unit of the main unit of the printer.

#### <3>Remove the control PWB unit.

Remove the five screws that fix the control PWB unit to the main unit of the printer.

Then, hold the two grips and pull out the control PWB unit to remove it from the main unit.

#### <4>Mount the printer expansion kit ROMs(2 pcs.)to the control PWB.

Remove the ROMs(main and boot ROMs)from the control PWB and replace them with the two ROMs(main and boot ROMs)of the printer expansion kit.

The main and boot ROMs are indicated with "MAIN" and "BOOT" on the labels on the ROMs respectively.

When mounting the printer expansion kit ROMs, insert them to the same positions in the same direction as those before replacement and ensure that the inserted printer expansion kit ROMs are locked with the fittings of the sockets.

#### <5>Re-attach the control PWB.

Attach the control PWB to the main unit of the printer and fix it using five screws.

<6> Connect the cables to the control PWB.

Connect all the cables that have been removed in <2> to the original positions of the control PWB unit.

**If another peripheral device must be installed, carry out the following steps at the end of the installation work.**

2) Turn on the main switch of the main unit of the printer.  
Insert the power plug of the main unit of the printer to the outlet.  
Then, turn the main switch located on the front side of the main unit to the "ON" position.  
If the machine is equipped with a facsimile unit, turn on the FAX power switch.

3) Prepare to enable the printer expansion function.

To enable the printer expansion function, use the keys on the operation panel to enter the product key.

For entry of the product key, see the key operator's guide of the operation manual for the main unit.

#### **Carry out the network setting for the Print Server Card.**

Use a key operator program to carry out the network setting for this machine. For this network setting, the customer's network environment must be checked. Consult the network administrator to carry out the setting.

#### **In addition to the network setting for this machine, to use the machine in the network environment:**

According to the customer's network environment, install the driver software from the CD-ROM supplied with this machine and use the utility software supplied with the Print Server Card to set the network printer for the server computer.

For installation in the server computer and network setting, see the operation manual supplied with the main unit.

This setting must be carried out by the network administrator or based on consultation with the network administrator.

4) To check the operation of the printer expansion function.

When the network settings and the driver settings are complete, perform a test print to check if printing can be performed successfully.

(When test printing is completed successfully, use the "list print" key operator program to print the network settings and keep the printout for future reference.)

Installation of AR-P14 is now complete.

## [7] MAINTENANCE

The diagram illustrates the PCB layout for the ICU ASIC, showing its connections to various peripheral components. The layout is organized into several functional blocks:

- Top Section:** Contains the SDRAM I/F (SDRAM II F) and FRONT SCAN ASIC I/F. It shows connections to SDRAM components (SDQ07 to SDQ15) and the FRONT SCAN ASIC (FSCNENP to FSCNCLKP).
- Left Section:** Features the RET OR PM250 I/O I/F, which includes connections to RET OR PM250 components (RETPMA0 to RETPMD15).
- Right Section:** Includes the SC87J4810 and PCI I/F. It shows connections to SC87J4810 components (SC87J4810) and PCI I/F components (PCIA01 to PCIA15).
- Bottom Section:** Contains the PM22-A CHANNEL 1 I/F and various passive components. It shows connections to PM22-A CHANNEL 1 I/F components (PM22-A CHANNEL 1 I/F) and various capacitors (C235 to C262).
- Central Section:** Features the IC25 component, which is connected to various signal lines and components.

The layout includes numerous capacitors (C235 to C262) and resistors (R183 to R235) for signal conditioning and timing. The connections are labeled with component names and pin numbers, providing a detailed view of the PCB design.
